

Linerless Labels

In addition to our wide variety of pressure-sensitive labels that use liners, Chicago Tag & Label also manufactures linerless labels. Linerless labels, in a nutshell, adhere to themselves instead of using a silicone-based liner. With a release coating applied to the top of the facestock, these labels are easy to peel off the roll but readily adhere to the desired surface. These types of labels are a sustainable, cost-effective, and customizable solution.

Benefits of Linerless Labels

Decreased Storage and Shipping Costs - Without liners, rolls can hold up to twice as many labels, leading to fewer rolls and lighter/ more economical freight loads.

Faster Application - Save time removing and disposing silicone liners and reducing roll changes.

Label Protection - Release coating doubles as a protective barrier from chemicals, UV, moisture, and other elemental exposure.

Save on Waste Disposal - Minimize excess waste and save time discarding label liners in the workplace.

Flexible Label Sizing - Need a custom size? We manufacture linerless labels to the exact size needed.

Safer Work Environment - Decrease slipping and falling accidents by removing slick silicone material from the work environment.

Custom Linerless Labels

Chicago Tag & Label's linerless labels are made with a high-sensitivity and heat-resistant direct thermal paper for excellent UV resistance. The proprietary adhesive, available in temporary, semi-permanent, and permanent varieties, is designed for adhering to a wide assortment of substrates. These versatile labels are available in rolls with a 1" core and 5" OD, up to 4" wide.

Markets for Linerless Labels

Our linerless labels provide excellent image sharpness and durability for customers including:

- Retail
- Food Service
- Hospitality
- Field Services
- Warehouse & Distribution

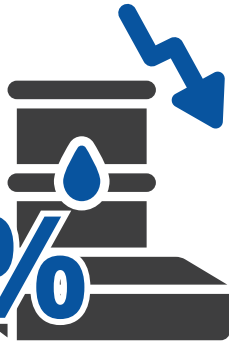

Environmentally Friendly Solution

As the world moves toward more sustainable practices, linerless labels prove to be an important asset. Since label liners typically contain a silicone base that doesn't decompose, they can create excess waste and are difficult to recycle. With our linerless labels, Chicago Tag & Label offers a more environmentally friendly labeling solution.

By The Numbers, Linerless Labels:

Reduce the raw materials needed to make labels by more than

15%

Reduce transport, warehousing, and material management costs by

50%
